Lystek announces new Public Advisory Committee for Southgate residents

Dundalk, Ontario – Lystek International Inc. is pleased to announce the formation of a Public Advisory Committee (PAC) to provide the community of Southgate with an opportunity to stay informed about the proposed Dundalk Organic Waste Recovery Centre. “Lystek is committed to earning the trust of the local communities in which we operate. We believe everyone has a right to be well informed about our activities every step of the way,” says Rick Mosher, Lystek International’s Chief Executive Officer.

The formation of the Public Advisory Committee is an interim measure that Lystek is initiating on a voluntarily basis as part of its efforts to establish and maintain a high degree of transparency about the Organic Materials Recovery Centre. The 6 to 8 member community group will be provided with regular updates on the project as well as opportunities to make suggestions regarding the development and ongoing operation of the Centre. “The whole idea of this committee is to ensure people have access to all relevant information about the project so that they can stay informed and provide input with respect to potential improvements to our operations,” says Mosher.

Lystek is inviting interested Southgate residents to submit their names for consideration for the Public Advisory Committee.

Members of the PAC will convene on a regular basis until final Ministry of Environment (MOE) approvals for the Dundalk Organic Waste Recovery Centre are received. At that time it is anticipated that Lystek will be required by the MOE to create a permanent, Public Liaison Committee (PLC). If so, existing members of the PAC will be considered as candidates for the ongoing PLC.

For more information and to schedule an interview with Lystek International President Rick Mosher, please contact Kevin Litwiller, Director of Business Development, at 1-888 501-6508 ext 106 or kevinl@lystek.com

Lystek International is an award winning company founded in 2000 by leading researchers at the University of Waterloo. The company has patented processes for converting biosolids into an organic-based fertilizer product that meets the stringent guidelines of the Ontario Ministry of Agriculture Food & Rural Affairs (OMAFRA) and the Canada Food Inspection Agency (CFIA). Lystek is committed to environmental stewardship and contributing to the economic well-being of the communities in which it operates. The Dundalk Organic Materials Recovery Centre will leverage Lystek’s proven, technologically advanced process to convert organic waste into a safe, nutrient rich, organic-based fertilizer product that is approved for agricultural use by the Canadian Food Inspection Agency.
